Hearing Protection Systems

Our custom sleeping ear plugs are designed to block noises, such as snoring, which you may encounter whilst sleeping. Ultra comfortable, soft and custom made. Just fit and forget for a good night's sleep. We hollow out the main body of the plug, allowing the plug to flex when you lay your head on your pillow, meaning the plugs always match the shape of your ear. Made from 25 shore medical grade silicone.

Frequency Hz	63	125	250	500	1000	2000	4000	8000
Assumed protection dB	25.6	26.0	24.3	19.8	24.0	30.0	32.6	45.6

SNR = 28 **H = 30** **M = 24** **L = 23**

SNR	Average attenuation characteristics in the standard frequency spectrum.
H	Average attenuation characteristics in the higher frequency spectrum (x>2000Hz)
M	Average attenuation characteristics in the middle frequency spectrum (500<x<2000Hz)
L	Average attenuation characteristics in the low frequency spectrum (x<500Hz)
